

Amendments to the Specification:

Please replace paragraph [0027] with the following amended paragraph:

[0027] The means for improving performance in wireless transmit/receive units (WTRUs) are numerous. By way of example, a short list includes diversity, beamforming, multi-spatial layering, and coding. It is inherent that a “performance enhancement” only improves existing performance of a WTRU and the term does not extend to include technology which enables or facilitates the fundamental performance of a WTRU. Generally, the present invention provides an indication to a user regarding the gain that a WTRU is obtaining from using some enhancement technology.
